Notes:

1. Eligibility for the competent authority pathway requires both a qualification (Category B and F) or assessment (Category A, C, D, E, G) component AND the prescribed post-examination or post-training experience. Applicants are not eligible for the competent authority pathway unless they have also completed the prescribed post-examination or post-training experience.
2. Experience in another competent authority country can be substituted for the post-examination or post-training experience, for the purposes of meeting the criteria for eligibility for the Competent Authority pathway.

The Board will accept an application based on completion of a medical program or assessment from one category and the experience component from another category. Where an applicant has completed the experience component from a different category, the experience component completed must be exactly as defined in that category¹ and approved by the competent authority of the country in which it was completed.

For example:

- Completion of the LMCC (and related assessments) (Category C) AND 12 months supervised training (internship equivalent) in the UK (Category A or B). In this case, the experience component is approved by the General Medical Council in the UK, not by the Medical Council of Canada.
 - Completion of the LMCC (and related assessments) (Category C) AND Successful completion of a minimum of two years of graduate medical education within a residency program accredited by the Accreditation Council of Graduate Medical Education.
3. Australian clinical experience can be substituted for the post-examination or post training experience, for the purposes of meeting the criteria for eligibility for the Competent Authority pathway.

This period of practice in Australia may also be accepted as meeting the requirements for the 12-month period of supervised practice which is required to gain general registration via the Competent Authority pathway.

¹ The experience component in Category D (USA) is two years.
