

Medical Board Submission

Regarding the public consultation on clearer regulation of medical practitioners who provide complementary and unconventional medicine and emerging treatments

As an Australian citizen/resident I feel it's important that I have the freedom of choice in the type of medical care that I use to address my ^{PERHAPS FUTURE} chronic health issues.

~~I have been suffering from:~~

Conventional medical doctors have not been able to successfully treat my condition(s) and bring me to a satisfactory level of health.

Pharmaceuticals and the use of conventional methods simply did not work (and in some instances also delivered unwanted side-effects in my case) and, seemed to waste Medicare funds and resources.

It was only when I saw an integrative medical doctor who included lifestyle change, diet and supplements of vitamins and minerals to address my problems that my condition began to improve.

If I cannot see an integrative doctor, or the Doctor is restricted in what he or she is able to prescribe for me, I feel that my health will deteriorate and have a continuing impact on my family, my work, and my wellbeing.

Additional notes:

I WANT A CHOICE FROM THE MEDICAL WORLD
NOT ONE CONTROLLED BY PHARMACEUTICALS
AND I VOTE !!

Concerned,

Medical Board Submission

Regarding the public consultation on clearer regulation of medical practitioners who provide complementary and unconventional medicine and emerging treatments

As an Australian citizen/resident I feel it's important that I have the freedom of choice in the type of medical care that I use to address my chronic health issues.

I have been suffering from: Chronic illnesses for more than 20 years & I have used many different types of treatments over the years, which is my human right. Removing my right to choose treatments is a violation and it is unconstitutional.

Conventional medical doctors have not been able to successfully treat my condition(s) and bring me to a satisfactory level of health.

Pharmaceuticals and the use of conventional methods simply did not work (and in some instances also delivered unwanted side-effects in my case) and, seemed to waste Medicare funds and resources.

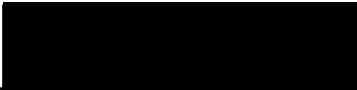

It was only when I saw an integrative medical doctor who included lifestyle change, diet and supplements of vitamins and minerals to address my problems that my condition began to improve.
